

Gemini Smith she/her

Senior Software Engineer in Test (SDET) • Test Automation

Cypress • Selenium • Appium • BrowserStack • Sauce Labs • Cucumber / BDD • CircleCI • API and contract testing • Go • Ruby
Tempe, AZ (open to remote) • gem@mxy.dev • (480) 371-9822 • linkedin.com/in/gemini-smith • github.com/mxygem

Senior engineer in test, 8+ years across test automation, DevOps, and backend Go. I build test infrastructure like production software, and sometimes it becomes production: a test ad server I built at Brightcove still runs 6+ years after I left. Built cross-device video testing on BrowserStack and Sauce Labs, then Freshly's Cypress and CircleCI platform. Since then, backend roles where I kept doing the quality work. Founded Ministry of Testing Phoenix.

EXPERIENCE

Gametime | Backend Software Engineer

Remote • 09/2023 – 09/2025

- **Built the Ticketmaster ingestion subsystem solo, validation included:** ~1,600 lines of Go with normalization, two-tier validation, and event and venue matching across every MLB team. Supported it live through the MLB playoffs.
- **Repaired 22,684 orphaned listings** after root-causing a MongoDB/PostgreSQL mismatch that left unsellable inventory live and caused refunds; extended the reconciliation tool to detect and fix them.
- **Cut parsing jobs ~30%** with a file-hash dedupe at the FTP ingress layer, ending ingest backlogs that let stale listings sell.

Syndio | Software Engineer (Backend)

Remote • 11/2021 – 05/2023

- **Unblocked two teams with one piece of work:** built mock APIs with controllable, URL-encoded responses plus a test suite that doubled as the backend contract spec.
- **Ended a company-wide outage in ephemeral environments** that had every engineer and QA person hitting silent failures. Self-initiated; root-caused to NGINX response-header limits. It never recurred.

Freshly | DevOps Engineer

Remote • 12/2020 – 11/2021

- **Protected a \$430M revenue funnel** with an automated failover system I designed and built in Go, with 88.9% core test coverage. It reroutes homepage traffic through Istio when the CMS fails.
- **Migrated 1.27B+ PostgreSQL rows with zero downtime and zero post-migration fixes** (Heroku to GCP, Striim CDC).

Freshly | Test Automation Engineer

Remote • 08/2019 – 12/2020

- **Built and scaled Freshly's automated test platform** on Cypress and CircleCI; set testing practices adopted team-wide.
- **Wrote and open sourced a Ruby gem** that lets Cypress, or any test framework, set up and change Rails app state remotely.
- **Led the CI migration from Semaphore to CircleCI**, cutting test execution time and improving developer workflow.

Brightcove | Senior Software Engineer in Test / Software Engineer (Backend)

Scottsdale, AZ • 11/2016 – 08/2019

- **Built cross-device video playback testing** with Selenium and Appium on BrowserStack and Sauce Labs, and managed the Sauce Labs relationship. A test video carried a QR timecode every second; per-second screenshots verified the player, device, and video all showed the same time.
- **Sole owner of test automation** for Server Side Video and Ad Insertion, supporting a global team of 12+ Go engineers.
- **Built a test ad server that is still in production 6+ years after I left.** Unprompted, rebuilt a hardcoded, single-format ad server as configurable test infrastructure on AWS Lambda and DynamoDB: VAST, SmartXML/Freewheel, and Google DFP from one URL. Adopted company-wide, including sales demos.

COMMUNITY AND OPEN SOURCE

- **Founded and ran Ministry of Testing Phoenix** for a year, organizing and hosting its meetups.
- **Cucumber contributor** (Ruby and Go); guest author for the Cucumber blog and CircleCI (three articles, two adopted into official CircleCI docs).
- **Speaker:** Desert Code Camp ("Communication for the Benefit of All"); Phoenix Golang meetup.
- **Freelance:** Cucumber Ltd; TDD consulting for Gistic Research Ltd; QA for Drone Racing League's racing simulator.

SKILLS

Test automation: Cypress, Selenium, Appium, Cucumber (BDD), TDD **Device clouds:** BrowserStack, Sauce Labs

Languages: Go, Ruby, Python, JavaScript **Data:** PostgreSQL, MongoDB, DynamoDB, Redis

CI/CD and infrastructure: CircleCI, Kubernetes, Docker, Istio, Terraform, GCP, AWS, Datadog
